Scoreboard Tab

Getting started with the Scoreboard Tab

The scoreboard page displays a table, where each row is a scoreboard connected to the recorder and each column represents a media show that can be displayed on a scoreboard.

The cell of the media show currently being displayed on a scoreboard will be highlighted in green.

The screenshot shows a web interface titled "Scoreboard Selection" with a navigation bar at the top containing links: Welcome, Meet, Race, Marshal/Referee, Devices, **Scoreboard**, Settings, Adapters, Licence, and Help. Below the navigation bar is a table with the following structure:

Scoreboard	RaceMode	Wylas Timing media show	Team standings	Marshalling	New Record	Thank you	My media show
	RaceMode	Wylas Timing media show	Team standings	Marshalling	New Record	Thank you	My media show
	RaceMode	Wylas Timing media show	Team standings	Marshalling	New Record	Thank you	My media show

The "RaceMode" cells in the first two rows are highlighted in green. Each column header has a small blue icon with a minus sign to its right. An "Add media Show" button is located in the top right corner of the table area.

A media show is a customized list of images, texts or videos which can be displayed in a loop.

RaceMode is a special (and the default) media show and means that the scoreboard will show the details of each race as it is made ready. It will also cycle through the media items associated with it, and briefly display the next media item as each race is readied. This is the media show you will use for the majority of your meet.

Other media shows display their media items in an endless list. This is useful for displaying messages, videos and club/sponsor logos during breaks in the meet.

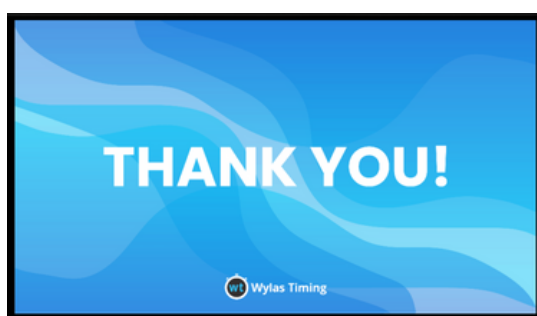

Scoreboard Tab

Displaying Media Shows

Clicking on a cell will cause the scoreboard to start showing that particular media show.

Welcome Meet Race Marshall/Referee Devices Scoreboard Settings Adaptors Licence Help						
Scoreboard Selection						Add media Show
Scoreboard	RaceMode	Wylas Timing media show	Team standings	Marshalling	New Record	Thank you
	RaceMode	Wylas Timing media show	Team standings	Marshalling	New Record	Thank you
	RaceMode	Wylas Timing media show	Team standings	Marshalling	New Record	Thank you

The first scoreboard now displays the Thank You media show, ie:

While the second scoreboard continues to show the running meet. ie

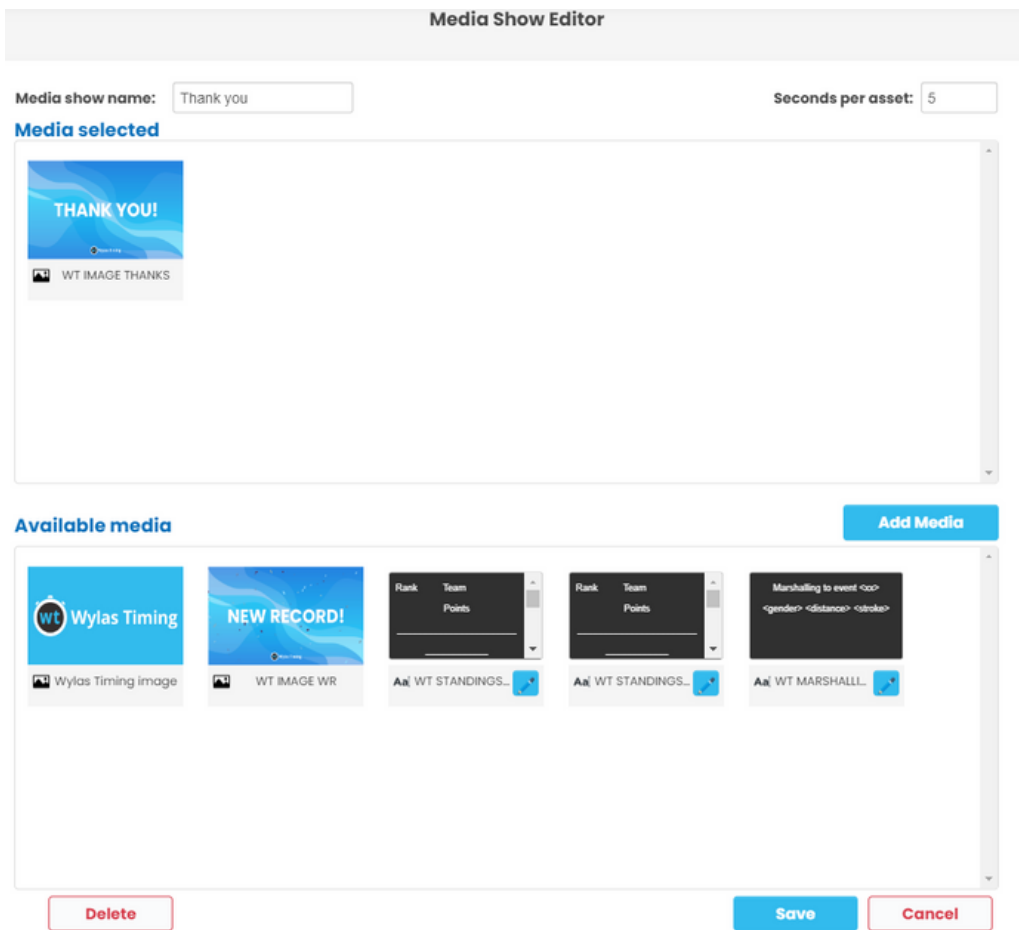

Or the default image when no race is selected. ie:

Scoreboard Tab

Adding/Editing a Media Show

Clicking on the pencil icon  in the header of the media show allows you to edit a media show, or the  button to add a new media show

The Media Show Editor interface is divided into two main sections: 'Media selected' and 'Available media'. At the top, there are input fields for 'Media show name' (containing 'Thank you') and 'Seconds per asset' (set to 5). The 'Media selected' section displays a list of media items, currently showing one item with a blue background and the text 'THANK YOU!'. The 'Available media' section displays a list of media items that can be added to the show, including 'Wylas Timing', 'NEW RECORD!', 'WT IMAGE WR', 'WT STANDINGS...', and 'WT MARSHALL...'. A 'Delete' button is located at the bottom left, and 'Save' and 'Cancel' buttons are at the bottom right.

Editable fields:

- Media show name
- Seconds per asset: Number of seconds to show each media item for
- Media selected: You may drag these media items to 'Available media' to deselect them or to a different position in the list of 'Media selected' items to change their order of appearance.
- Available media: You may drag these media items to 'Media selected' to add them to the media Show.

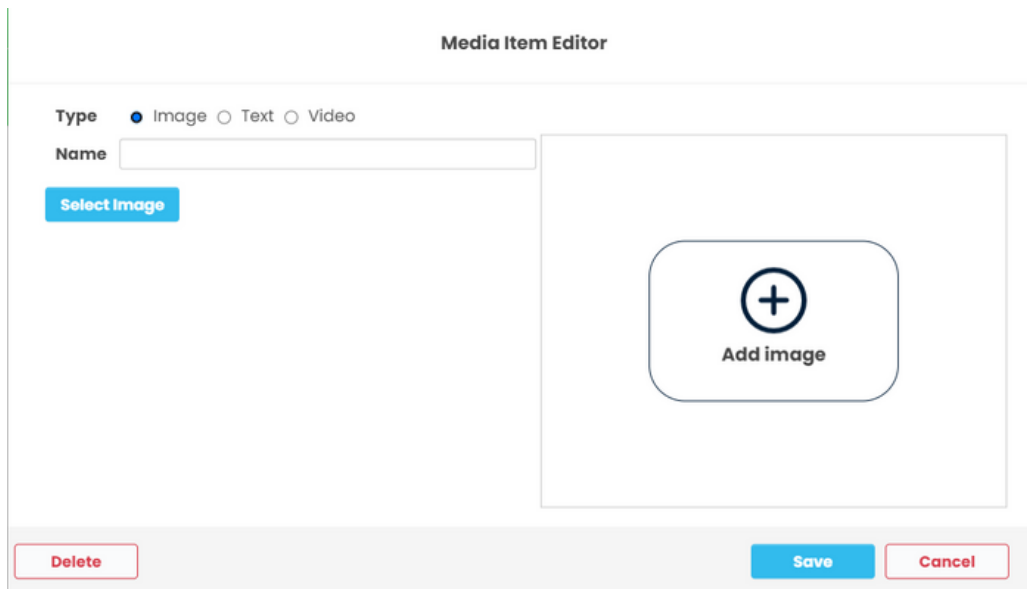

You can craft your Media Show to contain whatever Media Items you would like to show. This could be as simple as a single Thank You screen to a list of sponsor logo that are iterated through.

See the next section for how to add new Media Items that you can include in your Media Shows.

Scoreboard Tab

Adding/Editing a Media Item

Add a new Media Item by clicking on the Add Media button from the Media Show Editor, or click on the pencil icon on an Available Media item to edit it. When you do you will see the Media Item Editor.

The screenshot shows the 'Media Item Editor' interface. At the top, the title 'Media Item Editor' is centered. Below it, there's a 'Type' section with three radio buttons: 'Image' (selected), 'Text', and 'Video'. Underneath, there's a 'Name' label followed by a text input field. To the left of the main preview area is a blue button labeled 'Select Image'. The main preview area is a large rectangle containing a rounded rectangle with a plus sign icon and the text 'Add image' below it. At the bottom, there's a grey bar with three buttons: 'Delete' (red outline), 'Save' (blue), and 'Cancel' (red outline).

There are 3 types of Media Items: Image, Text and Video.

Choose the type, give it a name and then either select and image/video or add in the text you want to display. For a text item, you can even choose the text and background colours.

Once you have saved your new Media Item it will be available for inclusion on your Media Shows.

Wylas Timing Scoreboard App

Setting up WT Scoreboard

If you have purchased a timing system, the scoreboard app will come pre-loaded on your Scoreboard HDMI dongle or Scoreboard box. Just connect the Scoreboard device to the display on which you want to show the scoreboard results via the HDMI port.

If you have sourced your own Android device, such as a tablet, on which to display the scoreboard results, then downloadable the WT Scoreboard app from the Google Play Store.

Step 1

Click on WT Scoreboard icon to start the application. NB: WT Scoreboard can be configured to start when the device boots up so that you just need to switch on your TV. The Scoreboard will try to automatically find and connect the Recorder, after which you will see a screen like below.

The number shown below the connected label is the device id, this value will be useful to identify your scoreboard when setting scoreboard selections.

Step 2

The blue wi-fi icon  indicates that you have a connection to the Recorder Server. Pressing on it will disconnect the Scoreboard from the Recorder.

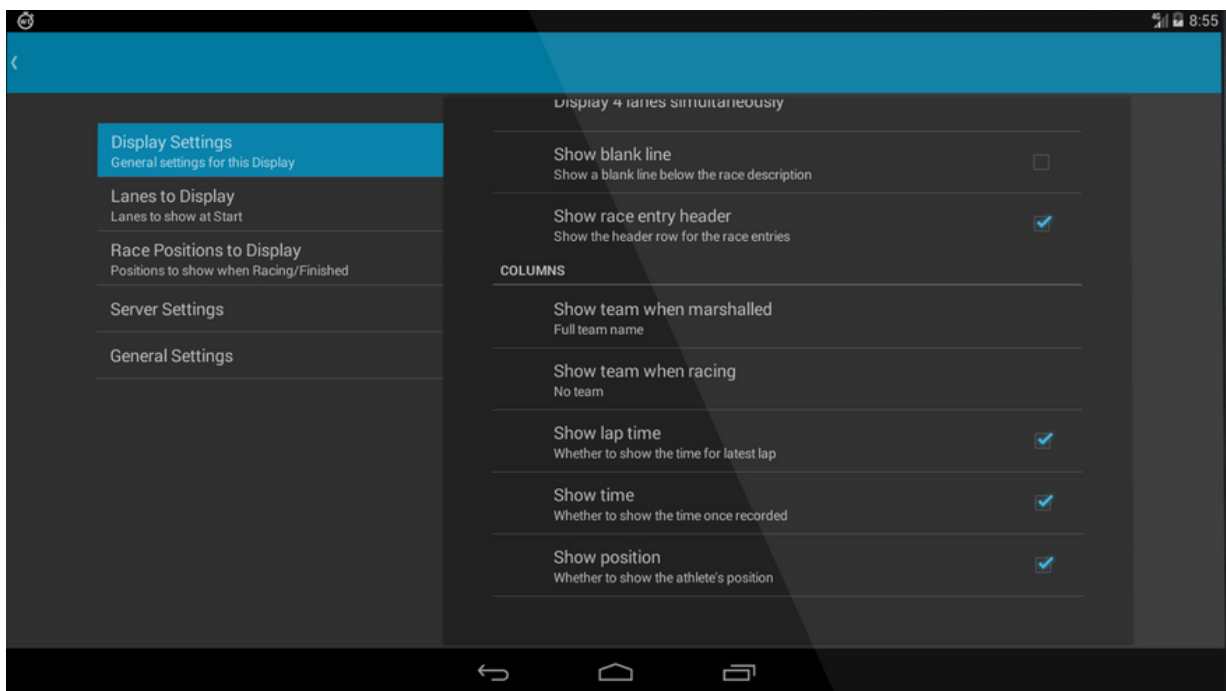

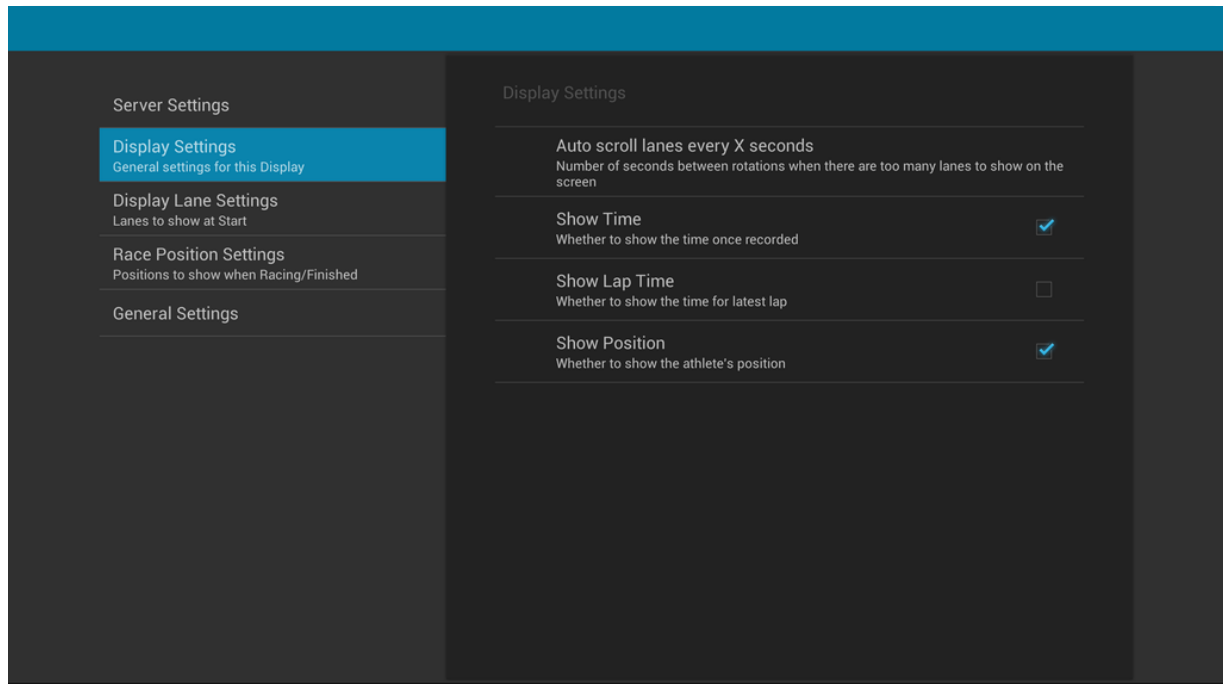

Step 3

When the wi-fi icon  appears grey, this will indicate that you have lost connection to the Recorder server. Pressing on it will reconnect the Scoreboard to the Recorder.

Wylas Timing Scoreboard

Scoreboard Settings

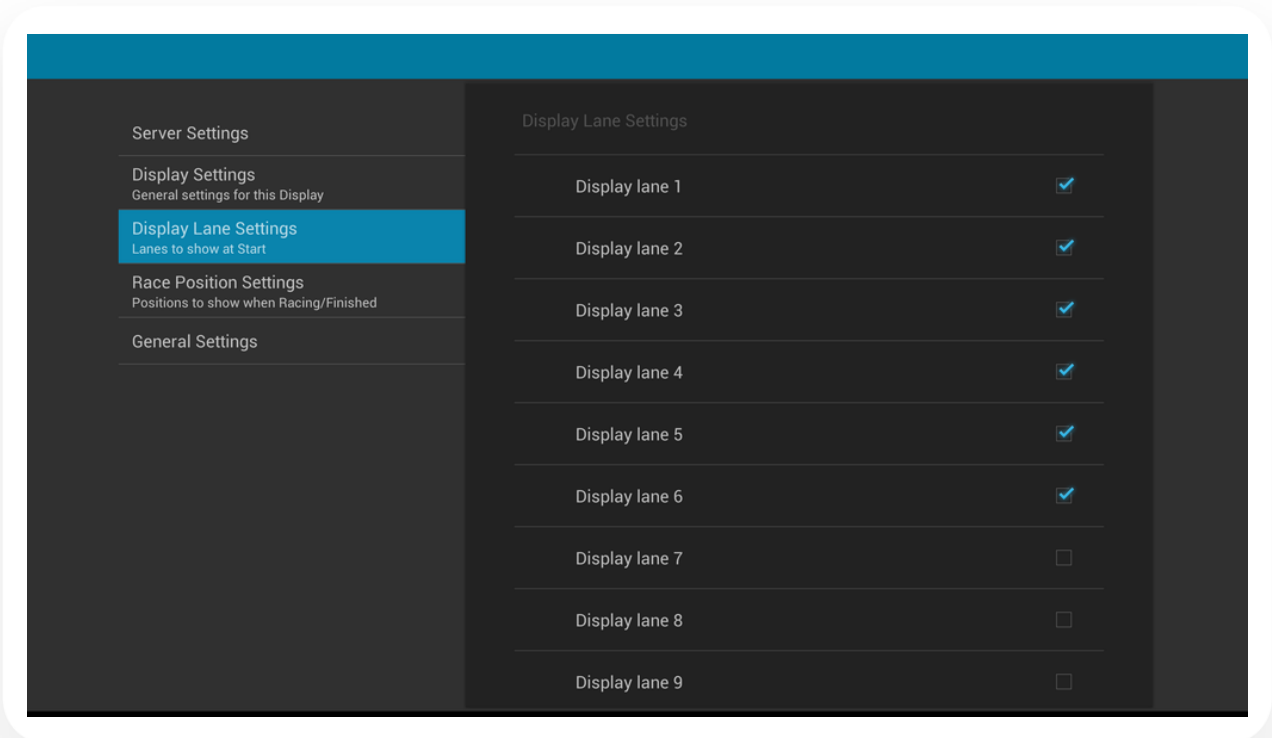

You can configure most elements of the Scoreboard, including which rows and columns to show and how and when to scroll. You can view the various options on the screens below:

Wylas Timing Scoreboard

Lane Settings

If you have multiple Scoreboards, you can configure each Scoreboard to only show certain lanes at the start of each race. For instance, your left hand Scoreboard might only show those lanes on the left hand side of a pool.

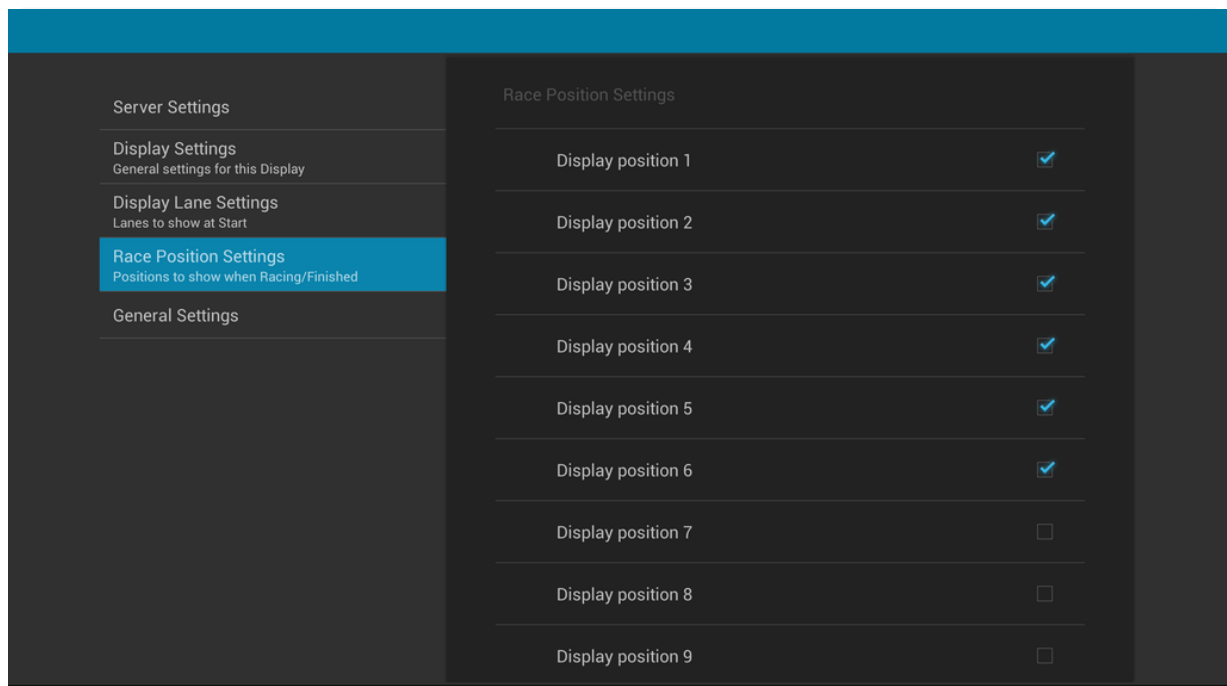

In the image above, you can see it has been configured to show lanes 1 through 8. If more lanes are configured that can be displayed at one time, then the Scoreboard will scroll through all the configured lanes.

Wylas Timing Scoreboard

Race Position Settings

By default, Wylas Timing will display the results in position order, ie, 1st place at the top, then 2nd and so on. Alternatively, you can show results in lane order. If you have multiple Scoreboards, you can configure each Scoreboard to only show certain race positions at the end of a race. For instance, your left hand Scoreboard might show race positions 1-4 and the right hand Scoreboard might show race positions 5-8.

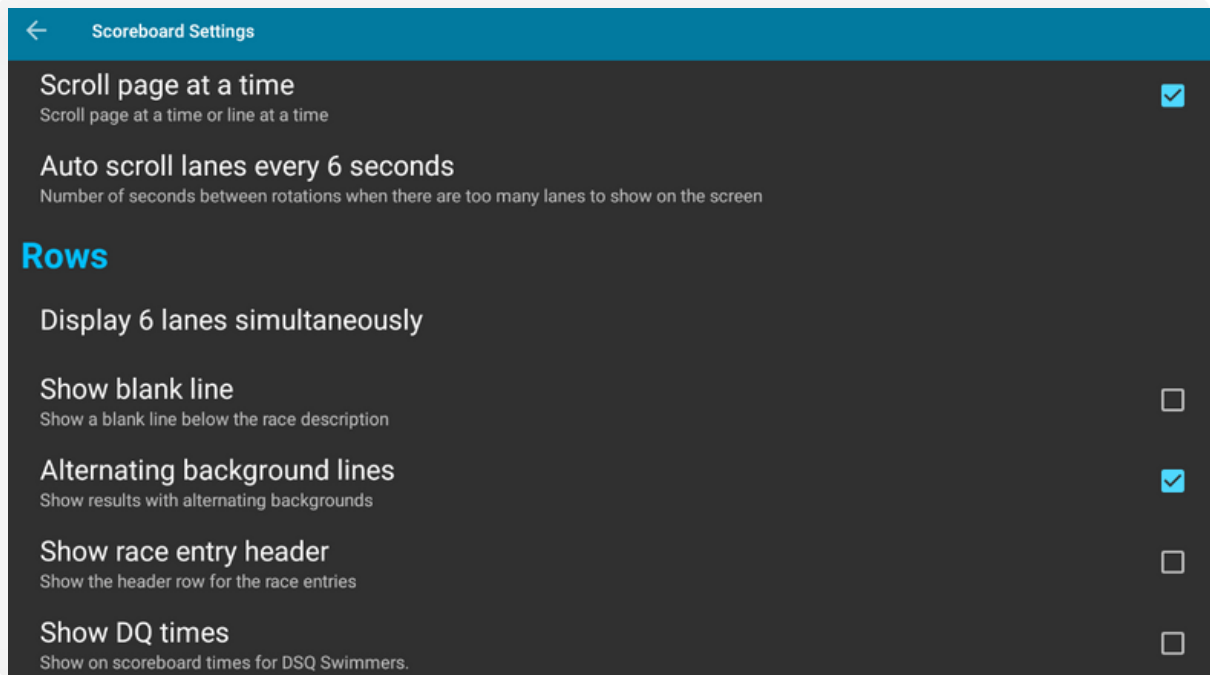

If more positions are configured than are able to be shown at one time, then the Scoreboard will scroll through all the configured positions.

Wylas Timing Scoreboard

Alternating background lines setting

If you want the athletes names, lanes and times to be more readable, you can set alternating background lines settings.

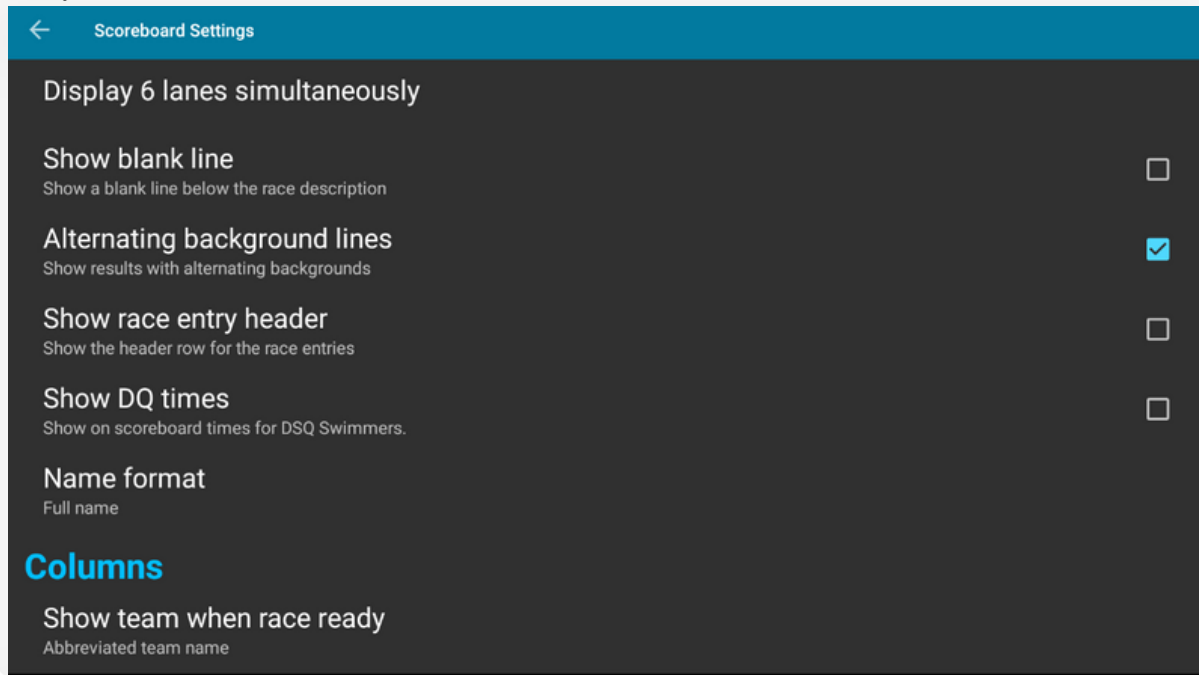

When activating this setting, the start list looks like:

Boys 10 years 100m Freestyle		
Event: 2	Race Ready	Final: 1
1	ABBY SCURR	MANS
2	CIARA BROWN	MAN
3	JACOB ROSE	MAN
4	ARCHER SCANLAN	MAN
5	HAMISH	MAN
6	LEVI MOXEY	MAN

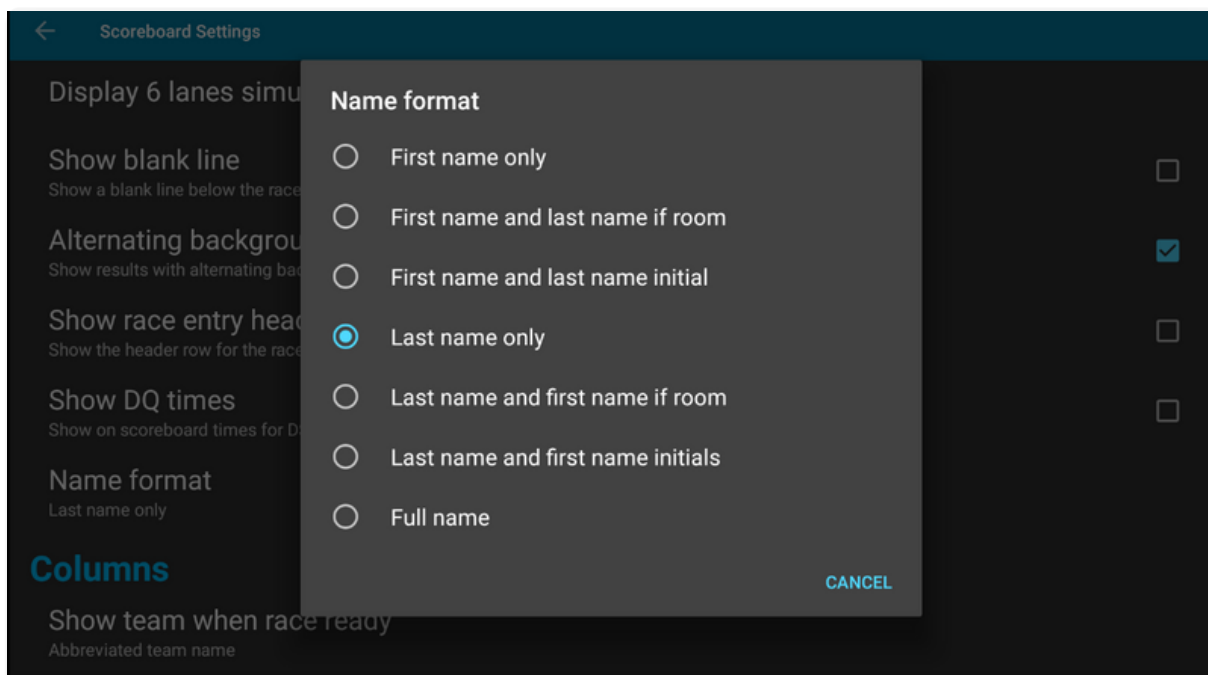

Wylas Timing Scoreboard

Name format setting

The scoreboard app includes a setting to apply a shortening method for the athletes names. This is a useful setting when entry lists contain long names. By default the name format is set to full name (first name + initials + last name).

Names shortening methods available:

Wylas Timing Scoreboard

Name format setting

Once the new setting is applied, the start list names are displayed with the new name format selected.

Last name only:

	Boys 10 years 100m Freestyle	
Event: 2	Race Ready	Final: 1
1	SCURR	MANS
2	BROWN	MAN
3	ROSE	MAN
4	SCANLAN	MAN
5	BLACKMORE	MAN
6	MOXEY	MAN

First name only:

	Boys 10 years 100m Freestyle	
Event: 2	Race Ready	Final: 1
1	ABBY	MANS
2	CIARA	MAN
3	JACOB	MAN
4	ARCHER	MAN
5	HAMISH	MAN
6	LEVI	MAN
